

Environmentally friendly Anhydrite
flowing floor screeds

Gypsol Screeds

Gypsol; environmentally friendly flowing screeds

LKAB Minerals manufacture high quality and performance **anhydrite binder**, which is used in a range of **Gypsol screeds**, suitable for use in any project from small new builds and renovations to large scale constructions. Gypsol screeds can be used in all build types including traditional construction, timber frame, modular, lightweight steel and concrete.

About LKAB Minerals

LKAB Minerals is an international industrial minerals group with a leading position in a number of product applications. LKAB Minerals was founded in 1989 and is part of the Swedish state owned mining company LKAB, a leading producer of upgraded iron ore.

In 2018, LKAB Minerals acquired the Gypsol brand, forming part of their civil engineering and construction portfolio.

Gypsol Product Range

LKAB Minerals range of screeds include:

Gypsol Classic

Gypsol HTC

Gypsol Rapide

Gypsol Rustique

Gypsol TS-15

Gypsol TS-20

Gypsol XS

Gypsol Modular

Gypsol Summit

Gypsol TimBRE

Gypsol Diamond

Gypsol Sureflo

About this brochure

About Gypsol binder

Gypsol is a high performance anhydrite screed binder produced from a by-product of industry.

The range of Gypsol screeds offer a wide variety of benefits.

Gypsol screeds are available in twelve formats, ensuring that the right product is available for every application. Gypsol screeds are available nationally from over 90 locations through a comprehensive network of distributors and trained installers.

Gypsol screeds are self-curing and require no artificial curing membrane after installation. The dimensional stability of Gypsol, whether heated or unheated, significantly reduces the risk of cracking without the need for reinforcement. Additionally, Gypsol screeds can be placed in much larger bay sizes when compared to cement based materials.

Environmental data

Gypsol binder is produced from a by-product. Unlike the manufacture of Portland cement, Gypsol requires very little energy with no elevated temperature processing. This means a carbon footprint for Gypsol binder of just 26.26kg/tonne of material, compared with that for cement of around 900kg/tonne. For any project, a reduction of 94% of the CO₂ emissions attributed directly to your screed can easily be achieved. Further CO₂ savings can be achieved by ensuring your specification is correctly calculated.

Recycled Content	Binder 98% screed up to 40%
Carbon Emissions	Binder 10 to 30 kg/tonne Mortar 30 to 50 kg/tonne
VOC	Virtually Zero
Recyclability	100%

Benefits of Gypsol screeds

Proven project base

LKAB Minerals offer a range of case studies and project examples for many of the Gypsol products. Speak to your local representative or visit the website for further information.

Health and Safety

Amongst other benefits, the materials used in Gypsol Screeds and the nature of the installation when compared to other screeding systems, mean that installers benefit from reduced wear and tear on joints and muscles, no issues with cement based skin conditions and much reduced manual handling.

Technical Support

Unrivalled in-house technical expertise and dedicated laboratory ensures that LKAB Minerals can provide ongoing assistance and on-site practical support at all stages. At LKAB Minerals, we encourage discussion between designers, engineers, ready-mix suppliers and ourselves.

Gypsol Classic

About Gypsol Classic

Gypsol Classic is a general purpose screed designed to offer a smooth flat and level surface for use in the vast majority of interior non wearing applications where a subsequent floor covering is to be used. Gypsol Classic screed is perfectly suited to use in floating, bonded or unbonded construction and can easily incorporate electric or warm water underfloor heating systems.

Gypsol Classic is our most commonly used screed. It is a general-purpose screed, providing a multi-purpose solution for almost any application.

Gypsol HTC

About Gypsol HTC

Gypsol HTC is designed for use with both conventional heat sources and renewable technologies. It is not pipe specific and is suitable for use with any underfloor heating system and in any type of construction, subject to suitable engineering. It is suitable for use over timber floors, Lewis decking, and more traditional concrete and masonry systems.

Gypsol HTC is specially formulated to allow thinner depths than our conventional Gypsol screeds allowing just 20mm cover to heating conduits. Gypsol HTC is suitable for all types of floor covering including not only traditional tiles, carpets, vinyl and wood floors but also with suitably formulated floor sealers such as clear epoxy coatings. Coupled with Gypsol HTC's unrivalled and independently tested thermal conductivity, this offers the ultimate in underfloor heating efficiency and comfort.

Gypsol HTC is a screed specifically designed for use with underfloor heating and cooling systems, making it suitable for both warm water and electric underfloor heating.

Gypsol Rapide

About Gypsol Rapide

Gypsol Rapide offers all of the benefits of an Anhydrite floor screed, plus the added advantage of an unrivalled and independently verified drying time of just 14 days. This allows the user to install floor coverings in significantly less time than for competing screed systems.

Gypsol Rapide also benefits from no requirement to remove laitance to help promote drying. As with ALL screeds some light mechanical abrasion may be necessary in order to properly prepare the surface to receive primers and adhesives in order to meet the requirements of the standards governing floor coverings.

Gypsol Rapide can be used with or without underfloor heating. When used in conjunction with any type of underfloor heating it creates a high performance, highly efficient and environmentally-friendly heating system.

Gypsol Rapide is a unique, faster drying screed, providing a drying time of just 14 days.

	Gypsol Rapide
Physical Data	
Appearance	Off white fluid mortar
Density	Wet 2200kg/m ³
	Dry 2000kg/m ³
Minimum Strength	C25 - F5 ^[1]
Required Flow (EN 13454-2)	230mm - 250mm
Reaction to fire	Class A1fl Non Combustible

^[1] Stronger mix designs may be available on request to allow for alternative applications.

Performance Data	
Working Time	Place and finish within 2.5 hours of batching ^[2]
Foot Traffic	24 to 48 hours
Loading	7 days
Drying (@20°C / 60% RH) ^[1]	14 days (in ideal conditions) ^[3]
Force Drying	Can be force dried in 7 days

^[2] Ensure account is taken of travel time from plant to site

^[3] Tests are based on 50mm depth of screed and indicate that it can take as little as 14 days to achieve 75% surface RH measured using calibrated hygrometer to BS8204:7:2003. A Carbide Bomb test may be used and must measure below 0.5% b/w. Moisture tests should always be carried out prior to application of finished floor covering. Note that drying rates are affected by site conditions, screed depth and added water whether pre or post installation.

Minimum Depth requirements	
Bonded	15mm ^[4]

Gypsol Rustique

About Gypsol Rustique

Gypsol Rustique screed has been developed to offer the unique benefits of a durable, stain resistant wearing surface when combined with easy to apply, colourless sealers from a range of manufacturers. Once the screed is installed by a trained screed installer the selected sealer is simply applied to the screed surface by a suitably qualified applicator. Gypsol Rustique screed offers a bespoke and variable surface finish expected from a rustic or industrial look floor.

Time from initial installation of the Gypsol Rustique screed to completion of the finished floor can be less than one month. It is perfect for use with or without underfloor heating and can be used for all domestic and commercial interior applications where light commercial and heavy foot traffic is likely.

Gypsol Rustique Screed has been uniquely developed and rigorously tested for use in conjunction with a range of finishing primers and sealers. These products are simple to use, colourless two part sealers, which can be applied by any suitably skilled installer directly to the surface of the screed.

Gypsol Rustique screed system is simple to use and remarkably fast to complete. The screed can then be sanded to taste dependent on the aesthetic requirements of the client and a seal coat is then applied. There are no special hardeners, sealers or polishes required and minimal maintenance.

Aesthetic floor finish

Gypsol Rapide provides a Aesthetically rustic floor finish once sealed and polished.

Gypsol Rustique is a fast track flooring solution for rustic or architectural looks.

Gypsol TS-15

Gypsol TS-15 is a unique screed, designed to be placed at a depth of just 15mm.

About Gypsol TS-15

Gypsol TS-15 is a specially formulated screed, designed to offer a strong and durable ultra-thin topping to a solid interior substrate; for example, in situ concrete or beam and block or precast concrete planks.

Due to its ultra-thin depth, just 15mm minimum, TS-15 can be dried quickly allowing rapid return to service and application of finished floor coverings.

Gypsol TS-15 is perfectly suited to flooring applications where height is extremely restricted and offers a lightweight cost effective alternative to smoothing compounds. It can be installed extremely quickly to at least 2000m² per day. This represents a significant saving in time when compared to bagged, site mixed smoothing compounds and levelling screeds.

Gypsol TS-15 screed is designed to be laid to a minimum of 15mm depth and can be used either bonded directly to a solid substrate prepared in accordance with BS 8204:7:2003 or un-bonded on a polythene membrane.

Gypsol TS-15	
Physical Data	
Appearance	Off white fluid mortar

Gypsol XS

About Gypsol XS

Gypsol XS is an enhanced strength flowing screed, produced using special additives to ensure a minimum strength of CA-C30-F6. It is suitable for use in both residential and commercial properties, including apartments, schools, prisons, hospitals and single dwellings where higher loadings and more durable screeded floors are required. In common with all Gypsol screeds, Gypsol XS screed also improves the environmental characteristics of the floor.

Gypsol XS is suitable for the encapsulation of underfloor heating systems, either electric or warm water.

Gypsol XS is an enhanced strength Screed, offering a minimum strength of CA-C30-F6.

Gypsol Modular

About Gypsol Modular

Gypsol Modular is designed specifically for use in Modular construction systems and screed is suitable for the encapsulation of an underfloor heating system, either electric or warm water. Gypsol Modular screed provides a concrete feel to a timber or light weight steel floor.

Gypsol Modular can be used for both on and offsite construction processes. and can be placed over light weight steel decking or on to timber. Off site screeded modular units may be lifted using suitable lifting equipment after just 72 hours.

Gypsol Modular is suitable for use in both residential and commercial properties, including apartments, schools, prison units, hospitals and single dwellings where light weight and durable modular floors are required.

Gypsol Summit

About Gypsol Summit

Gypsol Summit is suitable for most construction types including steel frame, concrete frame, lightweight steel and traditional masonry construction. It is suitable for residential and commercial properties, and where required can be used to improve the acoustic performance of the floor to meet or exceed Part E of building regulations.

Gypsol Modular can be pumped above 10 stories with ease using a suitable pumping system. A standard screed pump is unlikely to be suitable for very high levels and account should be taken of the hydrostatic head pressures when selecting suitable pipe work.

Gypsol Summit is designed specifically for use in high rise applications where the screed needs to be pumped to ten stories and above without the danger of segregation.

Gypsol TimBRE

Gypsol TimBRE is designed specifically for use in acoustic and non acoustic flooring systems which use timber joists as their primary supporting structure. Gypsol TimBRE is independently tested by Testconsult Ltd.

About Gypsol TimBRE

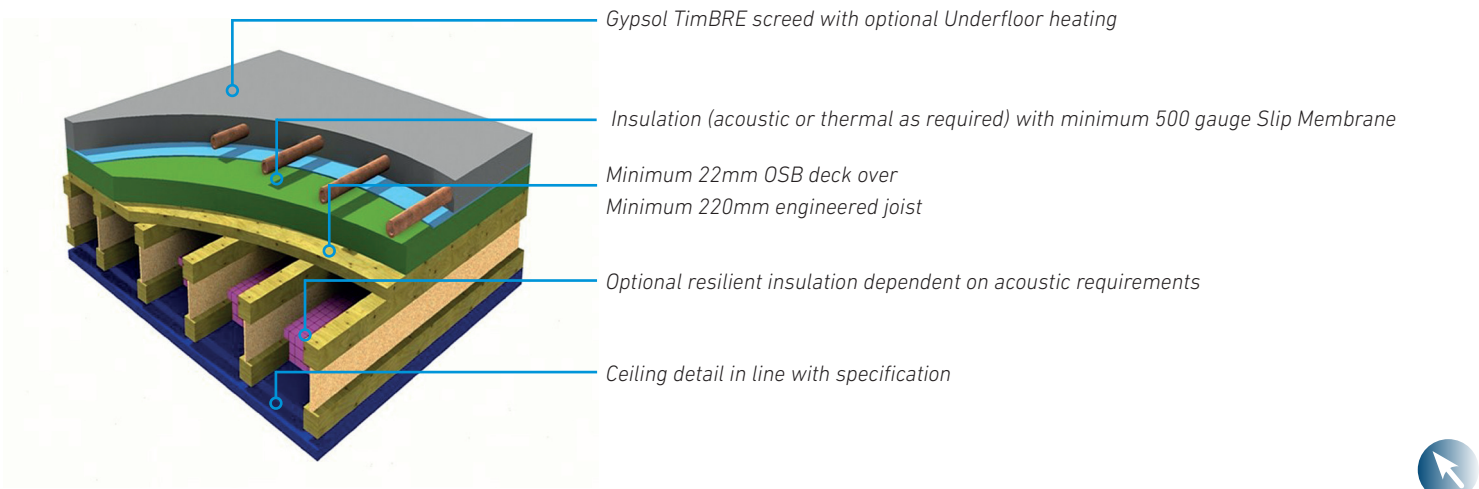

Gypsol TimBRE screed is suitable for the encapsulation of an underfloor heating system, either electric or warm water. Gypsol TimBRE is suited to both residential and commercial properties, and will help to improve the acoustic performance of the floor to meet or exceed Part E of the building regulations. Gypsol TimBRE screed also improves the environmental, fire resistance and durability characteristics and gives a concrete feel to a timber supported floor.

Where Gypsol TimBRE screed is designed to be used in conjunction with a compressible or an acoustic resilient insulation, an acoustician should be consulted to approve the design prior to installation where acoustic performance is required. Gypsol TimBRE is approved for use in the SoundBar® system by Metsä Wood.

It is essential that the timber supporting structure is suitably engineered to accommodate the increased loading associated with the screed.

Gypsol Diamond

About Gypsol Diamond

Gypsol Diamond is a unique and innovative "micro concrete", incorporating specially selected fine aggregates and high quality anhydrite binder to replace more traditional Portland cement.

It has been designed for use with Polish flooring systems, offering the performance and functionality of a high quality Gypsol product, whilst offering the beauty and durability of a polished concrete style floor. Gypsol Diamond is perfectly suited to the encapsulation of underfloor heating systems. And as no subsequent floor coverings are required, the time from installation to finished floor may be significantly reduced compared to more traditional flooring systems.

Please Note

The polishing contractor should use suitable hardeners and sealers. The Client should ensure suitability of Gypsol Diamond in terms of slip, abrasion and stain resistance for the specific application. LKAB do not offer any warranty for the polishing process. This must be sourced from the polishing contractor directly as required.

Gypsol Diamond is a unique flooring screed solution, offering the beauty and durability of a polished "concrete style" floor.

Gypsol SureFlo

Gypsol Sureflo is a bagged pre-blended Gypsol product designed to provide a complete solution to smaller building and renovation projects.

About Gypsol SureFlo

When added to the requisite amount of water, Gypsol SureFlo produces a flowing screed that requires minimal dappling for a smooth and level surface. Gypsol Sureflo is designed with a combination of high quality Gypsol binder and specially selected aggregates to provide a complete solution.

Gypsol SureFlo can be used to prepare a wide variety of sub-floors to receive tile, carpet, resilient flooring, wood flooring, as well as many other surface finishes.

Instructions for use

1. Place 4 litres of clean potable water per bag of Gypsol Sureflo into a suitable mixing bucket.
2. Carefully pour the sureflo powder into the water
3. Using a suitable paddle mixer thoroughly mix the screed to a homogenous mixture free from lumps.
4. Pour the screed onto the floor in the location where it is to be used.
5. Once the required depth of screed is achieved the screed should be dapped and finished in the normal manner (see Gypsol Installation Guide).

	Gypsol SureFlo
Physical Data	
Appearance	Off white fluid mortar
Density	Wet 2200kg/m ³ Dry 2000kg/m ³
Minimum Strength (28 days)	Flexural >5 N/mm ² Compressive >30 N/mm ²
Required Flow (EN 13454-2)	250mm +/- 20mm
Reaction to fire	Class A1fl Non Combustible
Performance Data	
Setting Time	Initial > 240 minutes
Light Foot Traffic	24 to 48 hours @ 20°C
Drying (50mm depth) ⁽¹⁾	At 20°C and 60% RH - 28 days Active force drying - 13 days
Drying Shrinkage	<0.02%

Drying times vary dependent on screed depth, ambient conditions and suitability of the building envelope.

⁽¹⁾ Independently tested and verified by Action Dry Ltd. Full report available upon request.

Approximate Coverage			
Area	Depth (No. of 25kg bags required)		
	30mm	35mm	40mm
5m ²	12	14	16
10m ²	23	27	31
15m ²	35	40	46
20m ²	46	54	61
